

Intradistrict Communication

DATE: Thursday, June 2, 2022

TO: All School Administrators

FROM: Carolyn Gough, Administrator of Teaching & Learning
Ben Jameson, Director of Evaluation, Research and Accountability

SUBJECT: 2022 WIDA Access Dashboards are in Tableau

The WIDA Access, 2017-Present Tableau dashboard has been updated with 2022 assessment data. The dashboard contains a [district report](#) as well as a [school report](#) (use the School Name filter to see data for your school). Both reports contain composite score data as well as data for reporting categories (listening, reading, speaking and writing) and language domains (comprehension, literacy and oral). School administrators may also drill deeper into the data using demographic filters.

A [dashboard](#) containing a list of individual scores for each student who participated in the 2022 WIDA Access is also available. School administrators may use the filters to narrow down the list to identify students by demographic or language proficiency level. Such lists may be used to target students for additional time and support for the next school year.

Please contact Ben Jameson in Evaluation, Research & Accountability for questions about WIDA Access results or how to use these dashboards.
