DATE: Thursday, May 11, 2023

TO: All School Administrators

FROM: Carolyn Gough, Administrator of Teaching and Learning
Ben Jameson, Director of Evaluation, Research and Accountability

SUBJECT: 2023 WIDA Access Results in Tableau

The WIDA Access results for the 2022-23 school year have been added to Tableau accounts. School administrators will be able to see composite proficiency scores (language proficiency levels) as well as scores for language domains and reporting categories as far back as 2017. Reports are available as overall school results or individual student results.

In addition, there is a table that lists WIDA Access results by student based on 2023-24 enrollment (as it was listed in Skyward at the beginning of May when the report was ran), which means that school administrators can use this information, among other things, to assign students to ESL study skills classes or ensure that these students are enrolled in classes where the teacher has an ESL endorsement. Middle schools will be able to see scores for incoming 7th graders and high schools will be able to see scores for incoming 10th graders.

Aggregate school reports may be found [here](#).

Student results, including results by next year's enrollment, may be found [here](#).

Please contact Ben Jameson in Evaluation, Research & Accountability with any questions about these Tableau dashboards.
