

PEST CONTROL

An Introduction of our Integrated Pest Management Program

It is the mission of Jordan School District to maintain a safe, clean and healthy learning environment. The Jordan School District is implementing this Integrated Pest Management (IPM) program to effectively manage pests. The primary goal of the IPM program is to proactively manage pests, pest-allergens, pest damage, and pest-vector disease, exposure to children, faculty, staff, and patrons.

In order to avoid pest outbreaks in our schools, we need to use this time as an opportunity to pest proof our workspace. Be it a conference room, desk, custodial closet, or kitchen, we can do a few things to minimize pests in our workspace. Dry food, snacks, etc. should not be left on your desks or even inside of your small filing cabinets. Take them home, or throw them out. Clean up food scraps and store in plastic containers with tightly sealed lids.
