Event Description

Panorama is a data rich Early Warning System (EWS) that allows for LEA's and school teams to systematically address Tier 1 and Tier 2 student needs.

Tier 1:

- How can LEA and school teams utilize the dashboard to triangulate data to understand Tier 1 strengths and weaknesses of a school system to address student attendance?
- How can LEA and school teams utilize student perception data to inform attendance systems?

Tier 2:

- How can LEA and school teams choose, track, and implement Tier 2 student interventions?
- How can LEA and school teams determine if interventions are effective and implemented with fidelity?
