Vivi Pro and Vivi Lite

Vivi is a screen mirroring device that is a truly cross platform solution - Supports 6 different operating systems including MacOS, iOS, Windows, Chromebook, Android, and Linux.

Vivi's Key Features & Benefits

Features	Description
KEY APP FEATURES	
Wireless Screen Mirroring	Whether teachers and students are using phones, computers or tablets, Vivi offers full screen mirroring with auto-detected resolution.
Play Video Direct	Because media plays straight from the Vivi Box, high-quality video streams directly from the school's hard-wired internet and doesn't slow down their Wi-Fi network.
Student Feedback Tool	Vivi's Student Feedback tool provides teachers with an intuitive way to gain real-time feedback, to help drive formative assessment and monitor the health and wellbeing of students. Teachers can quickly and easily conduct an Academic Poll (such as True/False or alphabetical multiple choice) or a Wellbeing Poll (such as, "How do you feel about the lesson?").
Combined Rooms	Administrators or teachers can temporarily combine the Vivi-enabled displays in separate rooms to create one flexible learning space, with multiple displays.
Pause Screen	To maintain privacy and security during a mirroring session, teachers can freeze an active stream, leaving their presentation on the shared display while they perform other tasks on their device.
Student Request Control	Students can request control of the shared display from the App, giving them the opportunity to share their work and receive real-time feedback from peers and teachers.
Annotation Suite	There is the option to annotate on a captured screenshot or on a blank Virtual Whiteboard, which can be used by students to take notes during class or by teachers to present a lesson to a central display, from anywhere in the room.
KEY SCHOOL-WIDE FEATURES	
Vivi Central	Administrators can manage, monitor and maintain your school's entire Vivi network from our easy-to-use cloud-based administration platform, Vivi Central.
Digital Signage	The school's network of Vivi-enabled screens can function as a digital signage system. Administrators can upload media, create playlists and signage groups, and schedule broadcasts for specific times.
Cross-Platform	Truly Cross-Platform Solution – Supports 6 different operating systems (MacOS, iOS, Windows, Chromebook, Android, Linux).
Guest Access	To save time, guest presenters can be given access to a display without being registered as a user. The guest will have the same capabilities as the presenter, apart from being able to create more guest codes.
Splash Screens	The Vivi-enabled screens throughout your school can be set to display a customized screen with your school's branding, when not in use.

Vivi Lite vs. Vivi Pro
